“Enterprise Management Hardware Solutions”

Our Mission...

Mogacom Devices is a leading provider of application-specific microcomputers, data acquisition devices & communication hardware designed for industrial control tasks and transaction-based commercial applications. Mogacom's target markets include enterprise solution providers, hardware and software integrators, and value added resellers (VARs). Our end-user customers range from hotel chains and multi-unit retail operations to transportation and manufacturing companies.

Mogacom products utilize a hardware/firmware architecture that allows easy customization to meet specific customer needs. Unlike standard PCs that utilize resource-intensive operating systems and numerous components, our “single board” microcomputers are specifically designed to be more reliable, less expensive, and immune from viruses, freeze-ups, crashes, and slow internet sessions.

Benefits:

- 25% the cost of a standard desktop PC.
- More reliable and more efficient than a standard PC.
- Easily customizable to fit the needs of your application.
- 1/10 the size and 90% less power consumption than a standard PC.
- Reduced cost of ownership in maintaining, upgrading, and servicing.
- Immune to all virus attacks and secure from tampering.

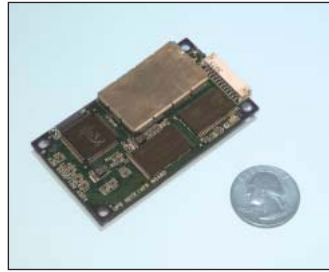

Products:

Microcomputer
(MC-512-1)

Optional serial data collector
(SDC-876-1)

Optional GPS data collector
(GPS-4093-1)

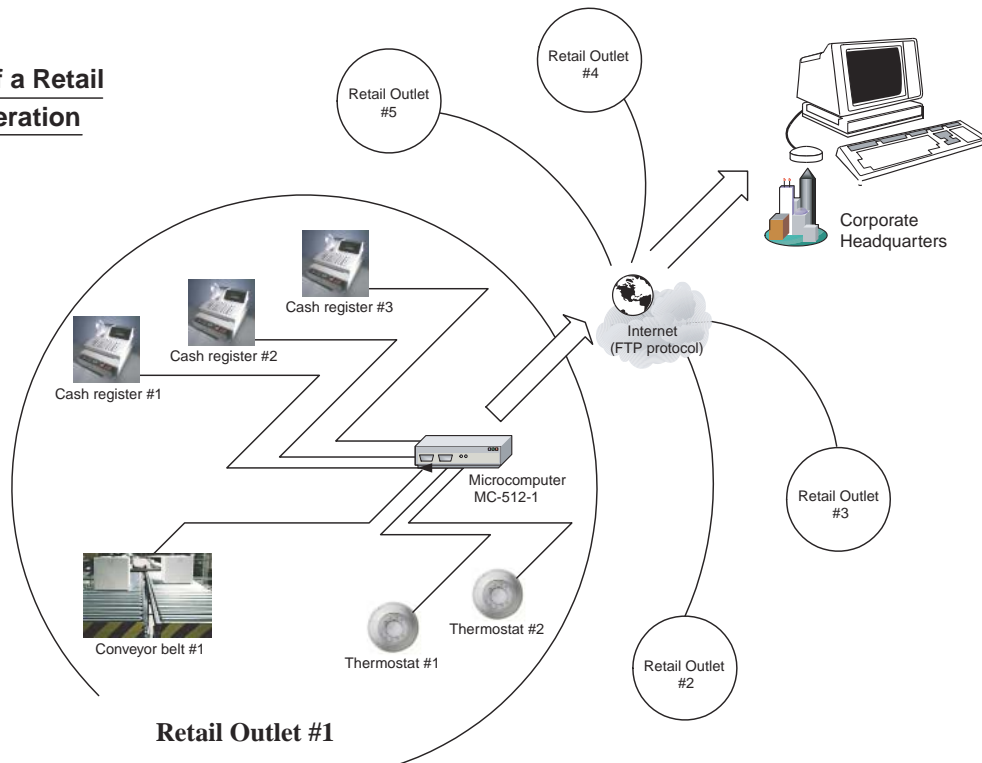

Optional PC reset card
(PCR-95-3)

Features:

- Real-time/remote data acquisition
- Remote system monitoring
- Remote process control
- LAN, DSL, & modem connectivity
- Automated email notifications & log reports
- Time-stamped event uploads
- 4 MB data logging buffer (expandable)
- Interfaceable to I/O sensors & controllers
- 4 built-in serial ports (expandable)

Example of a Retail Chain operation

Applications:

Mogacom products can be used in a wide variety of commercial and industrial applications that require remote system monitoring/control tasks and real-time data acquisition using DSL or modem. Our products empower headquarters operations to remotely monitor and evaluate the performance of each business location, and provide instant access for changing processes and improving efficiency. Applications and markets include:

- Energy monitoring and management
- P.O.S./cash-register data streaming
- Security monitoring
- Process engineering
- Inventory management
- Facility/building management

- Hotel chains
- Retail outlets
- Fast food chains
- Manufacturing/production facilities
- Warehousing and shipping companies
- Power/utility plants

If you have an application that requires hardware design expertise, chances are we can assist you with our existing product line or with a custom solution to meet your specific needs. Please feel free to contact us about our solutions capabilities.
